

**Position: DBA SQL SERVER****Experience Required: 6+ Years**

The SQL Server DBA will be responsible for the implementation, configuration, maintenance, and performance of critical SQL Server RDBMS systems, to ensure the availability and consistent performance of our applications. This is a “hands-on” position requiring solid technical skills, as well as excellent interpersonal and communication skills.

**Responsibilities**

- Manage SQL Server databases through multiple product lifecycle environments, from development to mission-critical production systems.
- Configure and maintain database servers and processes, including monitoring of system health and performance, to ensure high levels of performance, availability, and security.
- Apply data modeling techniques to ensure the development and implementation support efforts meet integration and performance expectations
- Independently analyze, solve, and correct issues in real time, providing problem resolution end-to-end.
- Refine and automate regular processes, track issues, and document changes.
- Assist developers with complex query tuning and schema refinement.
- be available to work with product support team for critical production systems in different time zones from case-to-case basis.
- Perform scheduled maintenance, backup and support release deployment activities after hours.
- Share domain and technical expertise, providing technical mentorship and cross training to other peers and team members.
- Able to perform DB backup and restore for complex environment and large DB size. Able to manage DB logs and size for performance purposes.
